Document: GOS-AVISO-REP · Version: 0.4 · Date: October 4, 2026

This document has two parts: A) the short disclaimer that appears on every research report, profile card, and gO Score Report, and B) the expanded version on sources, methodology, AI, and limitations, which is linked from the short disclaimer. The data between ‹ › changes in each document (for example, the Organization's name, the date, or the folio), and the Platform fills it in when the document is issued.

A. Short disclaimer

A.1 Research report (cover and footer of every page)

> Notice. Research report prepared by gO Score for the internal and confidential use of ‹requesting Organization› as of ‹cutoff date and time›. It gathers information from identified sources and from documents provided by the requester, and contains analyses generated by gO Score, in part using artificial intelligence. Third-party information may contain errors or be out of date. We do not guarantee its accuracy or completeness, or the outcome of any transaction. This research report is not a credit rating and does not guarantee solvency, identity, certifications, or compliance. Do not use for credit, insurance, employment, or housing decisions about individuals. Sources, methodology, and limitations: ‹short link to the expanded version›. To request a correction: goscore-app.com/go-score/correccion (English: goscore-app.com/go-score/en/correction).

A.2 Directory profile card (at the bottom of the profile card)

> Information from public sources ‹source name, license, date of consultation› and, if the company is a member, from its published profile. Appearing here does not imply that the company is a member of, verified by, approved by, or affiliated with gO Score. The data may contain errors or be out of date. Is this your company, or is there an error? ‹Suggest a correction›.

A.3 gO Score Report (footer of every page, all editions)

> gO Score Report ‹folio› generated by gO Score on ‹date› · Methodology ‹version› · ‹edition› edition for ‹audience›. It reflects the evidence and verifications indicated as of that date. The gO Score is not a credit rating or a certification and does not guarantee solvency, payment, identity, certifications, compliance, or absence of fraud. Permitted use: evaluating a commercial relationship with ‹company›; prohibited for credit, insurance, employment, or housing decisions about individuals. Current status: goscore-app.com/go-score/verificar/‹folio›. Corrections: goscore-app.com/go-score/correccion (English: goscore-app.com/go-score/en/correction).

A.4 Viability reading (next to the result)

> Viability reading: an automated commercial opinion based on the information found. It is not a credit rating, a guarantee of payment, or a credit recommendation; it does not change the gO Score and is not published on the profile. The decision rests with the party conducting the

transaction.

A.5 Public verification page for a folio

> This page confirms that the document with folio ‹folio› was issued by gO Score and whether it remains current, has expired, has been revoked, or has been updated. It is not an official certification or a guarantee.

B. Expanded version: sources, methodology, AI, and limitations

B.1 What a research report is

A gO Score research report is a document that gathers, organizes, and analyzes information about a company as of a cutoff date. It is not merely a compilation from the internet: it includes our own analyses (sufficiency of the information, viability reading, financial ratios, classification of news and opinions) and, if the Organization authorized it, work performed by AI models.

B.2 Four types of information, always kept separate

Type · What it means · How you will see it

Public source · Data taken from an identified source (official record, official list, public database, company website, court index, press, web search), with name and date of consultation. A search result is only a lead. · "Verified at official or primary source," "Secondary source (copy or directory)," "Search result (lead)"

Provided document · A file uploaded by the requesting Organization or by the company being evaluated. We do not check it unless stated otherwise. · "Provided document (private)," "Declared by the company itself"

Corroborated data · Checked against an identified source or criterion, on a date, by a person or by a Platform rule. · "Verified at official or primary source," with source and date

Inference or analysis · Generated by gO Score or by AI from other data (summaries, classification, field extraction, "suggested by the name," viability reading). It may be inaccurate. · "Indication," "suggested by the name," or "gO Score viability reading"; in addition, the report's disclaimer (A.1) states that it contains analyses generated in part with AI

The labels "Contradictory between sources" (sources that do not match) and "Not verified" may also appear.

B.3 Sources consulted

Each research report indicates the sources it actually consulted, with the date and result of each lookup; the available sources may change over time. Some sources do not allow automated lookups: the research report marks them as an interactive lookup and may rely on screenshots provided by the user. Depending on the country and type of company:

- United States: state business entity registries (Secretary of State), FMCSA/SAFER (with USDOT number), FDA public lists and alerts, public court indexes, USDA Organic Integrity; USDA PACA through a screen capture provided by the user.
- Mexico: INEGI DENUE, the SAT importers' registry and lists (Articles 69 and 69-B), SENASICA, and other public sector registries.
- Sanctions lists: OFAC SDN (U.S. Department of the Treasury).
- Other public sources: company website, public industry directories, trade press, complaint websites.
- Web search: through the AI provider's search tool and, if active, Brave Search.

• The requester's own experience: its payment history with that company recorded in gO (private).

• Third-party reports (credit, commercial directories): only if the Organization uploads them; gO Score does not purchase them. They are cited on the issuer's scale; a limit suggested by the issuer is an "issuer recommendation, not a gO approval."

B.4 How the company is identified

Before attributing a data point to a company, identifiers (RFC, EIN, USDOT, LEI), name, and location are compared. A match by name alone is not sufficient to attribute negative information; doubtful matches are shown as a "possible match" or are not shown. If a possible match appears on a sanctions list, the research report states what it is based on (name, alias, or identifier).

B.5 Use of artificial intelligence

With the Organization's "AI provider" permission, a model from the provider that gO has configured (Anthropic by default; its name is shown when the permission is requested) searches the web, reads documents, extracts fields, cross-checks sources, and drafts text. Sufficiency, the viability reading, and financial ratios are calculated by the Platform with fixed rules; the model drafts and summarizes. Controls: each statement must have evidence or it is removed; the highest label available depends on the class of source; phrases such as "no litigation," "solvent," "guaranteed payment," or a credit limit with an amount are blocked. Even so, AI can make mistakes: misread a document, conflate companies with similar names, or summarize incompletely. Review the cited sources before making a decision.

B.6 Limitations

1. Sources have delays, errors, and uneven coverage; some do not cover all states or municipalities.
2. Not finding a record does not prove that it does not exist.
3. A license, registration, or certificate proves only its own fact and as of its date; it does not demonstrate performance or solvency.
4. Provided documents may be false or altered; we do not perform forensic document examination.
5. Financial ratios depend on the statements that are uploaded; they are not an audit.
6. News and opinions belong to their authors; they are classified, not verified.
7. The research report is a snapshot as of the cutoff date.
8. It is not legal, financial, or compliance advice; it does not replace your Organization's due diligence.

B.7 Permitted use

Evaluating a specific commercial relationship with the company and fulfilling your Organization's internal obligations. Prohibited: consumer credit, insurance, employment, or housing decisions about individuals; resale; publication; harassment or discrimination.

B.8 Corrections

The company or individual mentioned may request a correction even without an account (Corrections Policy). If a data point is corrected, we notify identifiable recipients of the research reports issued in the last 90 days.
